

Hayes University Upgrades to Nexus

Hayes Mechanical Inc has long been recognized as one of the leading installing and servicing contractors of boilers and burners in the greater Chicagoland area. They maintain in their 300,000 sq. ft. facility one of the most modern training and demonstration sights available, referred to lovingly as Hayes University. Mr. Richard Goulet, their sales manager, said “We have always prided ourselves on being able to show and train our customers on the best and newest proven technology and Nexus certainly fulfills that objective”. Rich further stated “There is really nothing that can compare to having our customers see first hand the operation and advantages of the equipment we sell”.

The Nexus system with O2 trim was donated by South Side Control Supply Co., the local authorized Fireye and Nexus distributor. It was installed under the supervision of Mr. Bob Pauli of Hayes and final commissioning was performed by Fireye factory personnel. This allowed Hayes personnel to be part of the installation and start-up process from it’s inception. We know that our people are trained on installing and commissioning of a Nexus system by having them participate from the beginning, said Mr. Pauli.

Mr. Pauli further said “ We have installed trim systems in the past but none that performed as well as Nexus”. Bob went on to say “ We were all pleased and honestly a little surprised by the self learn O2 trim function and how we are now able to maintain maximum efficiencies throughout the firing range of the Webster burner”. Bob credits the precise control of the air and gas supplies provided by Nexus which eliminated the inaccurate control incurred with the older linkage system with the improved efficiencies.

“Hayes University will continue to be the showcase for the latest technology and we thank all of those involved with this Nexus installation” said Mr. J. D. Mooney VP of Hayes.
